

Chevrolet Colorado - GMC Canyon: 2004-2010

Steering and Suspension

Performance. Design. Selection.

Mevotech is the only supplier of control arms for the Chevrolet Colorado and the GMC Canyon other than the original manufacturer. Mevotech Supreme X Factor parts are engineered to provide maximum durability and last longer than the OE parts. Designed and strengthened at the neck to provide maximum load transferring stability and vibration reduction at the ball joint, Mevotech Supreme X-Factor control arms offer the following features, adding up to outstanding value and reliability:

Ball Joints

- The ball joint can be greased when service is required extending the life of the part.
- The ball stud is finished with a black oxide finish for increased corrosion resistance.
- The metal-to-metal contact between the ball stud and the bearing is more durable, resisting transformation due to heat and friction.
- The dust cover is a pressed-in polyurethane double-bellow that protects vital components from environmental debris, remaining elastic even in extreme temperatures and conditions.
