MEVOTECH

BIMETALLIC TECHNOLOGY PATENTED SOLUTIONS

SUPREME

Mevotech's Bimetallic technology is the superior solution for extended service life on unitized aluminum control arms.

- Exclusive patented Bimetallic technology allows self-lubricating greaseable sintered metal bearings to be utilized in unitized aluminum control arms
- Enhanced forgings, cross sections and upgraded bushing designs optimize performance
- Engineered for increased durability under all service conditions

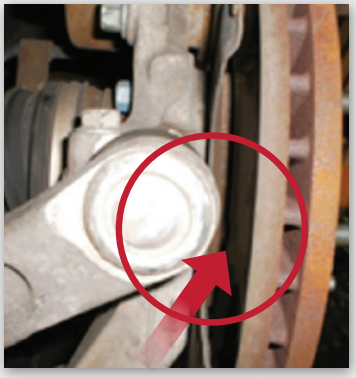

X Factor® LaborSaver®

MEVOTECH
PREMIUM PROGRAM

BIMETALLIC TECHNOLOGY

Mevotech's Bimetallic technology is the exclusive patented solution for extended service life unitized aluminum control arms. Engineered to excel in high heat and high load conditions, greaseable self-lubricating sintered metal bearings are a durable alternative to the OE-style plastic bearing.

Typical Failure Mode

HIGH HEAT, TIGHT SPACE
Heat from brake rotor is directly transferred into control arm due to close proximity

OE-STYLE PLASTIC BEARING
Excessive heat and non-greasable sealed design can lead to premature failure

Mevotech's Patented Solution

Innovative threaded ball joint design enables engineered greaseable self-lubricating sintered metal to be placed in unitized aluminum control arms.

Improved heat and wear resistance provides proven durability and extended service life.

SUPREME

Control Arms also feature:

- Greaseable self-lubricating sintered metal bearings
- Application-specific ball studs with added material
- Thicker forged materials
- Hardware and pre-installed components for quick fitting
