Mevotech TTX front upper control arm CTXMS20360 is engineered with an improved profile, with supplementary bracing. This adds rigidity and strength to the assembly as the vehicle is motion, reducing stress and flex, especially on the bushing components. Additionally, the bushings are upgraded with added knurling and filled-in with more material. The ball joint utilizes the greaseable, self-lubricating and sintered patented Dynamic Control Bearing™, which optimizes service life by managing pre-load and retains performance characteristics under high heat and high load conditions. **See Figure 1**.
