Mevotech Supreme front lower ball joint MK6711 is engineered to utilize a circlip as the supplementary retention method. This reduces installation time for the Professional Technician and is a frustration-free alternative to the staking/crimping method. Additionally, the potential of damage to the control arm body is limited when securing the ball joint after press-in. A Bootstaller™ tool is included in the box to seat the dust boot quickly and simply after press-in. **See Figure 1.**
